常规操作

git add

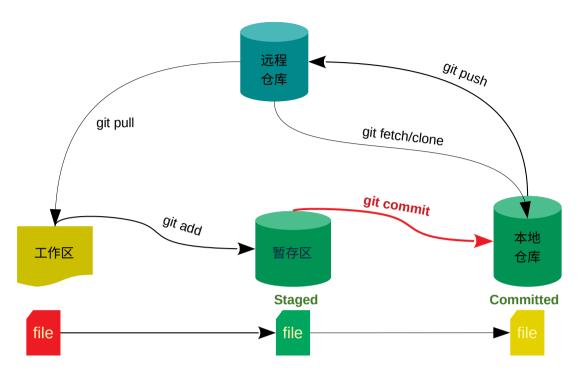

语法: git add <file>...

git add a.txt

git add . # 当前目录

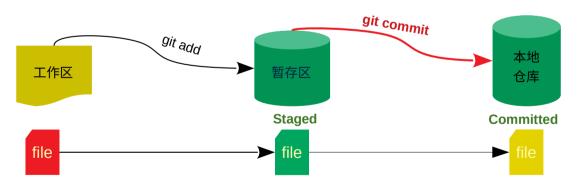

git commit

将已经追踪的文件提交到本地库: git commit -am "submit info"

对上次提交作补丁: git commit --amend -m "submit info"

git commit -amend -m "submit info"

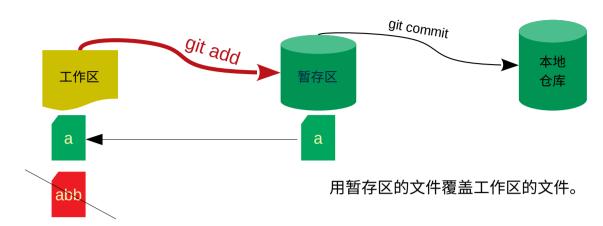

commit 6ac81a5 commit 5c54e53 commit 16c555b

git commit -amend -m "submit info"

执行之后: 上一次提交被撤销,用暂存区提交新版本。

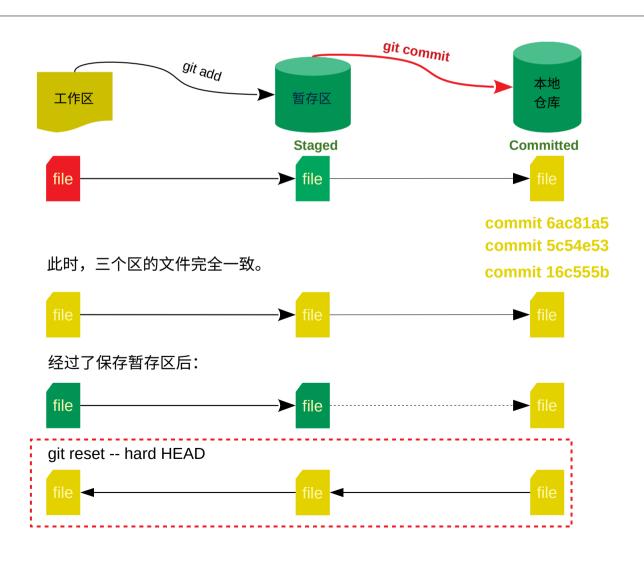

git checkout -- <file.name>

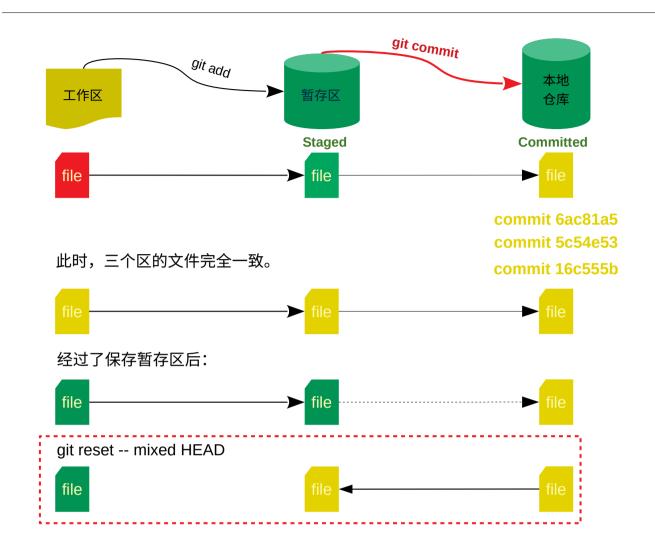

当前目录被暂存区文件覆盖: git checkout -- .

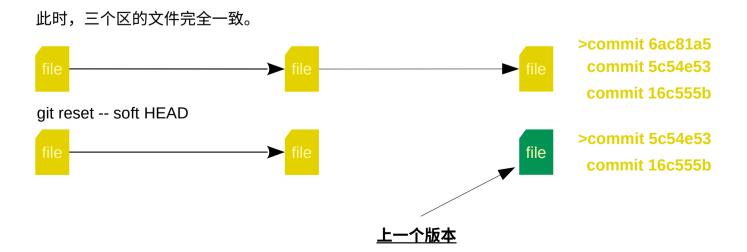

git reset -- hard HEAD

git reset -- mixed HEAD

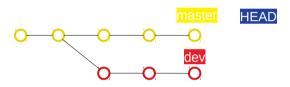

git reset -- soft HEAD^

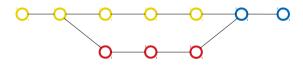

git rm -- cache a.txt
